

SAFE C2C

C2C BACKUP SERVICES

Agentless Cloud to Cloud Backup for your data

A RELIABLE AND SECURE SOLUTION TO BACKUP YOUR CLOUD BASED CORPORATE DATA

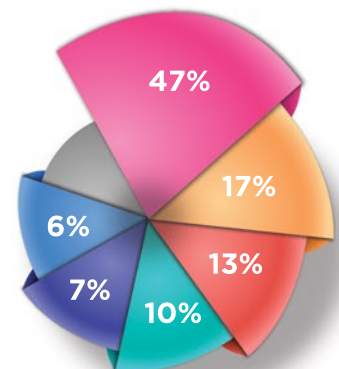

The adoption and migration to public cloud services and SaaS applications is increasing at an exponential rate. While the uptime and resilience of these platforms are mightily impressive with some boasting financially backed 99.9% service up times and actuals of up to 99.98%. So with such a reliable service & the flexibility to connect to your data, there is a common misconception that there is no longer a requirement to back up this data as the service providers do this for you.

The reality is that you still need to provide protection for your corporate data even while in these high availability platforms.

- ☑ User accidentally deletes data
- ☑ User over-writes data with "Save"
- ☑ Hacker or external party deletes data
- ☑ SaaS Service ends or licencing error
- ☑ Malicious internal delete of data
- ☑ Programmatical application error

Safe Data Storage provide a range of cloud to cloud agentless Backup services that automatically backup the data in your chosen cloud applications, transports and stores it with AES-256 Bit encryption in a location that suits your business.

33% OF COMPANIES USING A SAAS APPLICATION LOSE CORPORATE DATA

- End-user deleted
- Employee over-writes data
- Hacker deletes data
- SaaS Service ends
- Maitlicious delete
- Application over-writes
